

Maine Weekly Influenza Surveillance Report

June 19, 2009

Synopsis

During the week ending June 13th, 2009 (MMWR week 23)*, Maine reported widespread influenza activity. One new outbreak was reported, in a camp.

H1N1 (Swine Influenza)

As of June 19th, 2009, Maine had 50 confirmed cases of H1N1 (swine) influenza. For the most up to date information on swine influenza, please see our website at <http://www.maine.gov/dhhs/boh/swine-flu-2009.shtml>

Moderate Disease Surveillance

Outpatient influenza-like illness (ILI)

During the week ending June 13th, 2009, 0.6% of outpatient visits reported by five Maine Sentinel Providers were for influenza-like illness (ILI). ILI is defined as fever ($\geq 100^{\circ}$ F / $\geq 37.8^{\circ}$ C) AND cough or sore throat in the absence of a known cause. In the New England States, 1.5% of outpatient visits were attributed to influenza-like illness during week 23.

Outpatient Visits for Influenza-like Illness – Maine, 2007-09

New England is defined as Connecticut, Maine, Massachusetts, New Hampshire, Rhode Island, and Vermont.

* At time of publication, reporting may be incomplete. Numbers presented here may change as more reports are received.

Severe Disease Surveillance

Hospital inpatients

During the week ending June 13th, 2009, 6.3% of hospital admissions reported by three hospitals were attributable to pneumonia or influenza.

Hospital Admissions Due to Pneumonia or Influenza -- Maine, 2007-09

Laboratory Reporting

During the week ending June 13th, 2009, 170 samples were submitted for testing to the Maine Health and Environmental Testing Laboratory (HETL). 14 tested positive for influenza A (H1N1 Swine Origin Influenza Virus (SOIV)).

To date, 2,224 samples have been submitted, 148 (6.7%) were positive for influenza: 59 for influenza A H1 (seasonal), ten for influenza A H3, 15 for influenza A (by culture), 49 for influenza A (H1N1 SOIV), and 15 for influenza B. The influenza B strains will be forwarded to federal CDC for further typing.

Several of the influenza A (H1N1 SOIV) patients are not residents of Maine. They did test positive in the state, but are not counted in our confirmed state numbers.

Respiratory Specimens Positive for Influenza from HETL, Maine, 2008-2009

During the week ending June 13th, 2009, no reports were received from private reference laboratories.

A combined total of 2,237 specimens have been submitted since September 28, 2008 for respiratory testing to two private labs. To date, 270 samples were positive for influenza A, 50 samples were positive for influenza B, 328 samples were positive for RSV, one sample was positive for parainfluenza 2, 14 samples were positive for parainfluenza 3, six samples were positive for adenovirus, and two samples were positive for enterovirus.

Respiratory Specimens Positive for Influenza from Two Reference Laboratories, Maine, 2008 - 2009

Rapid tests are often used in clinical practice and these results contribute to the determination of the state influenza activity code reported to the federal CDC. Many hospitals, laboratories, and physicians' offices report these test results to the state. There is the possibility of duplication of results from reference labs and the rapid report called into the state. However, since influenza is not required to be reported, it is still assumed that these numbers are an underrepresentation of the true burden of influenza.

During the week ending June 13th, 2009, no rapid positive tests were reported. A combined total of 666 positive rapid tests have been reported this season. 533 were positive for influenza A, 101 were positive for influenza B, and 32 were not typed.

Positive Rapid Influenza Tests, Maine, 2008-2009

Outbreaks

During the week ending June 13th, 2009, one new outbreaks of influenza-like illness was reported in a camp. To date, 35 outbreaks of influenza-like illness have been reported; 18 in long term care facilities, one in an acute care facility, one in a congregate living facility, one in a camp and 14 in schools.

Influenza-like illness outbreaks by selected characteristics – Maine, 2008-09

* Outbreak definition is specific to facility type. An outbreak in long-term care facilities (LTC) is defined as ≥ 3 patients with ILI identified on same floor or ward during a short (e.g., 48-72 hour) period OR ≥ 1 patients with lab-confirmed influenza; an outbreak in an acute care facility (ACF) is defined as ≥ 1 patients with ILI or lab-confirmed influenza with symptom onset ≥ 48 hours post-admission (i.e., nosocomial); and an outbreak in a school is defined as $\geq 15\%$ absentee rate among student population due to ILI or lab-confirmed influenza.

^ Data unavailable

NA indicates not applicable

**Maine DHHS Districts:

York District: York county

Cumberland District: Cumberland county

Western District: Franklin, Oxford, and Androscoggin counties

Mid Coast District: Waldo, Knox, Lincoln and Sagadahoc counties

Central District: Somerset and Kennebec counties

Penquis District: Piscataquis and Penobscot counties

Downeast District: Washington and Hancock counties

Aroostook District: Aroostook county

Syndromic Surveillance

0.9% of visits to emergency departments at seven of Maine's hospitals were characterized as influenza-like illness during week 23, based on the patients' chief complaint.

Emergency Department Visits for ILI at Seven Hospitals – Maine, 2008-09

Fatalities Surveillance

Death Certificates

During the week ending June 13th, 2009, 10.5% of deaths reported by three city vital records offices were attributable to pneumonia and influenza.

Percentage of Deaths Attributable to Pneumonia and Influenza – Maine, 2007-09

Pediatric Fatalities

No influenza-associated pediatric deaths in Maine have been reported this season.

State health departments report the estimated level of influenza activity in their states each week. States report influenza activity as: 1) no activity, 2) sporadic, 3) local, 4) regional, or 5) widespread (definitions of these levels can be found at: www.cdc.gov/flu/weekly/usmap.htm). Maine reported widespread activity for the week ending June 13th, 2009 (week 23).
